International Society for the History of the Neurosciences (ISHN)  
MEMBERSHIP DIRECTORY 2021

The extent of each member's involvement in the ISHN Membership Directory is a matter of individual choice. The Directory lists each member's name and city, state/province, and country. Any further information (e.g., street address, occupation, telephone number, research interests) to appear in the Printed and/or Online editions of the Directory is included at the member's discretion. The Directory includes only dues-paying members of the International Society for the History of the Neurosciences and is created solely for the purpose of networking among ISHN members. Any other use, including solicitations, announcements, mail offers, etc., is strictly prohibited without prior approval from the President of the ISHN.

E-mail addresses are no longer hot-linked (one cannot click on the e-mail address and send a message), in order to try to frustrate Web harvesters which collect addresses for Spamming. Instead, each e-mail address is separated into its "account" and "domain" components separated by spaces and the word "at" in quotation marks. These can be cut-and-pasted into a New e-mail message; the separating spaces should be removed and "at" replaced by "@" (without quotation marks) before Sending the message.

UPDATES

Some directory entries have been carried over from the previous edition: members from 2019 and 2020 are included.

To update an entry, a member should complete a Membership Directory Personal Data Sheet and submit his or her corrected information to the ISHN website administrator:

**Subject area(s) of interest:**
- Linguistic aphasiology: language, production models, slips-of-the-tongue; phonemic paraphasia; Association Psychology (past and present); 18th and 19th century investigations of language and brain; David Hartley, Charles Darwin, Sigmund Freud

**Research and activities in progress:**
- Historical accounts of development of functional amounts of paraphasia
- Influence of Association Psychology on the evolutionary theories of Charles Darwin; the relations between “association chain models” and regular grammars (finite state automata)
- Historical development of theories of cerebral lateralization of function and the enigmatic syndromes of “crossed-aphasia”
